Installation Instructions:

Wiring methods shall be in accordance with the National Electrical Code/NFPA 70/NFPA 72/ANSI, and with all local codes and authorities having jurisdiction. Product is intended for indoor use only.

1. Mount unit in the desired location. Mark and predrill holes in the wall to line up with the top two keyholes in the enclosure. Install two upper fasteners and screws in the wall with the screw heads protruding. Place the enclosure's upper keyholes over the two upper screws, level and secure. Mark the position of the lower two holes. Remove the enclosure. Drill the lower holes and install the three fasteners. Place the enclosure's upper keyholes over the two upper screws. Install the two lower screws and make sure to tighten all screws (*Enclosure Dimensions, pg. 8*). Secure enclosure to earth ground.
2. Turn OFF main switch on the unit (*Figs. 1 - 2, pgs. 4 - 5*).
3. All units are factory set for 24VAC operation.
For 28VAC operation (where available) adjust unit prior to mounting and applying power as follows: Change the wire position so that the black wire [28V] is connected to the terminal marked [P] and the yellow wire [24V] is connected to the terminal marked [S].
4. Plug-in 3-wire line cord (*Figs. 1 - 2, pgs. 4 - 5*).

Keep power-limited (PTC protected outputs only) wiring separate from non power-limited wiring. Minimum 0.25" spacing must be provided. Use separate knockouts.

5. Measure output voltage before connecting devices. This helps avoid potential damage.

CAUTION: Determine the maximum operating voltage of the equipment being powered before adjusting the output voltage.

6. Connect devices to terminals marked [1P - 1N] through [16P - 16N] on PD16W/PD16WCB board (Figs. 1 - 2, pgs. 4 - 5), carefully observing polarity. Terminals marked [1P - 16P] are of the same polarity.
7. Turn main switch on unit to the ON (RESET) position (Figs. 1 - 2, pgs. 4 - 5).
8. Green LED(s) will illuminate when unit is powered.
9. Upon completion of the wiring secure enclosure door with screws (supplied).

Caution: Equipment to be installed/serviced by authorized/trained personnel only.
Shut branch circuit power before installing/servicing equipment.

WARNING: To reduce the risk of fire or electric shock, do not expose the unit to rain or moisture. This installation should be made by qualified service personnel and should conform to the National Electrical Code and all local codes. Use 75°C or higher rated UL insulated wiring for connecting the unit to the mains. Replace fuses with the same type and rating (refer to Thirty-Two (32) Output ALTV2432UL3 Reference Chart, pg. 2).

Terminal Identification:

PD16W/PD16WCB - Distribution Module

1P - 16P	AC output.
1N - 16N	AC output.

The lightning flash with arrowhead symbol within an equilateral triangle is intended to alert the user to the presence of an insulated DANGEROUS VOLTAGE within the product's enclosure that may be of sufficient magnitude to constitute an electric shock.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

CAUTION

RISK OF ELECTRIC SHOCK
